Outcome Charts

Market performance

- There was much relief in the month of March 2022 as stock markets rebounded strongly from the sell-off experienced in the months of January and February. US and Pacific markets were the best performers, while rebounds in Europe and EM were much subdued as risks about implications of Russia's invasion of Ukraine continue to linger.
- Inflation correlated asset classes such as property, commodities and equities involved in mining, utilities and defence outperformed as crude oil continues to trade above \$100/bbl. The oil market stabilised when the US announced the release of 1 million bbl/day from its Strategic Petroleum Reserves (SPR) while the OPEC+ continue to increase production by 400K bbl/day. Oil analysts expect the oil market to remain tightly supplied and prices to stay elevated in the near to medium term.
- Bond yields continued to jump higher in March as the US 10 year bond yield touched 2.5% while the UK 10 year bond yield touched 1.6%. Levels last seen in 2016. Bonds have been the worst performers YTD, dropping around 7% on fears high inflation will persist for longer and Central Banks will hike rates faster to curb it. The US Fed is open to a 50 bps rate hike for May 2022. This could be the first 50bps rate hike from the FOMC meeting in over 2 decades.
- Given the current backdrop, global energy prices are expected to remain elevated which could push inflation higher, or at the least ensure its persistence, forcing households to spend more on utilities and reducing their discretionary spend. This could potentially constrain growth or result in much higher wage increases, further adding to cost pressures on companies.

Notes:

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

The performance of each asset class is represented by relevant indices and expressed in GBP terms, which are selected by Copia Capital Management. Reference to a particular asset class does not represent a recommendation to seek exposure to that asset class. *Maximum Return Drawdown is defined as the largest single drop from peak to trough of the value of an asset class or portfolio over any timeframe within the stated period. This information is included for comparison purposes for the period stated, but is not an indicator of potential maximum loss for other periods or in the future.

Outcome Charts

-0.39

As of 28-March-2022

-0.60

As of 31-March-2022

Based on our proprietary Prediction Algorithm the Copia Risk Barometer is now reading -0.60 as of 31-March-2022, a change of -0.21 from last month, staying in the Red zone, indicating that the global economic outlook continues to be negative.

Primary drivers for the Risk Barometer:

- **Government bond markets:** With inflation expected to run high, the bond market is expecting central banks to start raising rate aggressively to bring it back in control. The yield curve in the US and UK have both briefly inverted. This suggests bond markets are getting increasingly nervous that economies may not be able to handle the expected pace of rate hikes. This is a cautionary signal from the bond markets suggesting the liquidity fuelled rally in risk assets is coming to an end. Historically, recessions have followed 9 out of 10 times, 18 months from the point when the yield curve inverts and remains in inversion.
- **Equity market pricing:** Economic growth expectations have been lowered going forward as companies start to feel the pressure from supply chain issues, rising inflation and stalling growth. Geopolitical uncertainty remains high and equities are likely to remain volatile in the near term. Markets have also lost their long term positive momentum, but have steered clear of a bear market.
- **Credit Spreads:** The tight credit spreads which had underpinned positive sentiment in risk assets all through 2021 have started to waver. Rising Credit Default Swap indices indicate corporate bond investors have now started to price in a probability of an inflation/Fed induced recession. Although these levels are not comparable to those seen during the Covid recession, the spreads have materially widened compared to levels seen over the last few months.
- **Overall:** The Risk Barometer is picking up much more negative signals than positive ones and is indicating a negative outlook toward risk assets. Volatility is likely to persist and if these conditions continue, economic growth outlook will be challenging for the rest of 2022.

Note: The Risk Barometer score varies between -1.0 and +1.0. A score of -1.0 indicates an extremely poor economic outlook, which is accompanied by a high probability of negative returns in risky asset classes. A score of 0 indicates a neutral economic outlook with almost equal probability of positive and negative returns in risky asset classes. A score of +1.0 indicates an extremely positive economic outlook, which is accompanied by a high probability of positive returns in risky asset classes.

Risk Barometer history

- The top chart shows the market performance (best and worst returns) during different Risk Barometer regimes.
- The bottom chart shows how the Risk Barometer has moved between different regimes and the triggers for regime changes.
- The Risk Barometer is a forward-looking quantitative model that provides a systematic rules-based approach for dynamic risk management.

Note: The Risk Barometer score varies between -1.0 and +1.0.

A score of -1.0 indicates an extremely poor economic outlook, which is accompanied by a high probability of negative returns in risky asset classes.

A score of 0 indicates a neutral economic outlook with almost equal probability of positive and negative returns in risky asset classes.

A score of +1.0 indicates an extremely positive economic outlook, which is accompanied by a high probability of positive returns in risky asset classes.

Source: Copia Capital Management, Refinitiv Datastream

Global Equities Returns is based on actual data of MSCI World Index for the period between 31-Dec-2016 and 31-Mar-2022.

Impact of dynamic risk management using the Risk Barometer

- Objective is to achieve similar levels of returns, with a narrower dispersion of returns (reduced tail risk)
- Can enhanced risk-adjusted returns
- Can deliver a smoother investment journey whilst mitigating downside risk
- We evaluate impact using a theoretical 60/40 portfolio with and without the Risk Barometer

	Annualised Return	Annualised Volatility	Sharpe Ratio	Maximum Drawdown
60/40 Portfolio	6.33%	8.21%	0.77	-25.40%
60/40 Portfolio with Tactical Tilts	6.39%	7.11%	0.90	-19.13%
Impact	→ 0.06%	↓ -13.47%	↑ 16.61%	↓ -24.68%

Note: 60/40 Portfolio consists of 60% allocation to MSCI World Index and 40% allocation US 10 year Bond Index rebalanced monthly. Figures are based on historic actual figures in GBP terms for the period 31-Jan-2000 and 31-Mar-2022. All return figures are before fees.

The 60/40 Portfolio with Tactical Tilts consists of dynamic allocation to MSCI World Index within a range of 40% to 60% driven by the Risk Barometer. The portfolio is rebalanced monthly and remaining allocation is to US 10 year Bond Index.

Outcome analysis as of 31 March 2022

Our 'Select Volatility' portfolio was previously known as 'Volatility Focus'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.*

Outcome (risk-return) analysis as of 31 March 2022

Our 'Select Accumulation' portfolio was previously known as 'Select'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.
The annualised risk and return figures are calculated based on a historic 5 year period as of 31-Mar-2022.
The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).*

Outcome (cumulative return) analysis as of 31 March 2022

Our 'Select Accumulation' portfolio was previously known as 'Select'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Available CPI data has been used as a comparator for real returns. CPI data for March 2022 is currently unavailable and not shown.

The cumulative returns are calculated based on the period from the inception date of the Select Accumulation portfolios (31-Oct-2016). The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).

Outcome (annualised return) analysis as of 31 March 2022

Our 'Select Accumulation' portfolio was previously known as 'Select'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Available CPI data has been used as a comparator for real returns. CPI data for March 2022 is currently unavailable and not shown.

The annualised returns are calculated based on a historic 5 year period as of 31-Mar-2022.

The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).

Outcome analysis as of 31 March 2022

Our 'Select Decumulation' portfolio was previously known as 'Retirement Income'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.
Actual data is used from 1-Mar-2017 to Present.*

Outcome analysis as of 31 March 2022

Our 'Select Thematic' portfolio was previously known as 'Copia Enhanced Equity'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.*
