Market performance

- Most equity markets posted strong gains over the three-month review period. That said, we did see some pullback in April which led to a tougher month for some regions. In April, markets have been roiled by higher-than-expected US inflation data leading to fears that any interest rate cuts by central banks may be delayed further than previously expected. As a result, we saw negative results from the US, Japan, and Europe in April with weakness in smaller companies given their sensitivity to higher interest rates.
- Conversely, the UK was the best performing equity market over the month (+3.2%) and 3-month period (+7.8%). This was partly due to better-than-expected economic activity with UK purchasing managers index rising to 54 (indicating expansion) as well as the UK markets higher exposure to energy and commodity companies which benefitted from a rally in commodity stocks. Emerging Markets also performed well over the period led by Chinese stocks which have rallied from multi-year lows.
- Bond markets particularly struggled in April, dragging the three months return into negative territory. Higher than expected inflation data out of the US has shifted market expectation to a view that any FED rate cuts will be postponed until later in 2024, with fewer overall cuts now expected. Conversely, the ECB signalled that the first cut could occur in June, after leaving its main interest rates unchanged at the April meeting. In any case, bond yields rose in April, delivering negative capital returns for both corporate and government bonds. At this point, we think the asset class will remain volatile as concerns persist that inflation appears to be stabilising at a level notably higher than the 2% target set by central banks.
- Better global economic growth prospects coupled with the danger of escalation in the Middle East has boosted commodity prices in recent months. Returns have been broad-based with positive gains generated across energy, metals, and agricultural commodities. Gold has been one of the strongest performers, up +13.8% over the past three months. It hit an all-time high of \$2,400 per ounce in mid-April but had retraced some of these gains by month end. Recent strength in the gold price has been attributed to a couple of factors. These include expectations of interest rate cuts in the US, which may weaken the US dollar, escalating geopolitical risk, and increased purchases out of China (by both domestic investors as well as the People's Bank of China).
- We have seen a positive start to the year for equity markets, but the road ahead will likely be bumpy as we navigate macroeconomic and geopolitical pitfalls. In any case, we are encouraged by the fact that economic activity is improving but are also mindful that inflation remains stubbornly high. As always, this should present some interesting investment opportunities over the medium to long term.

Notes:

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

The performance of each asset class is represented by relevant indices and expressed in GBP terms, which are selected by Copia Capital Management. Reference to a particular asset class does not represent a recommendation to seek exposure to that asset class. *Maximum Return Drawdown is defined as the largest single drop from peak to trough of the value of an asset class or portfolio over any timeframe within the stated period. This information is included for comparison purposes for the period stated but is not an indicator of potential maximum loss for other periods or in the future. Past performance is not indicative of future performance.

+0.42

As of 29-Mar-2024

+0.51

As of 30-Apr-2024

Based on our proprietary Prediction Algorithm the Copia Risk Barometer is reading +0.51 as of 30-Apr-2024, a change of +0.09 from last month, staying in the green zone, indicating that the global economic outlook remains positive.

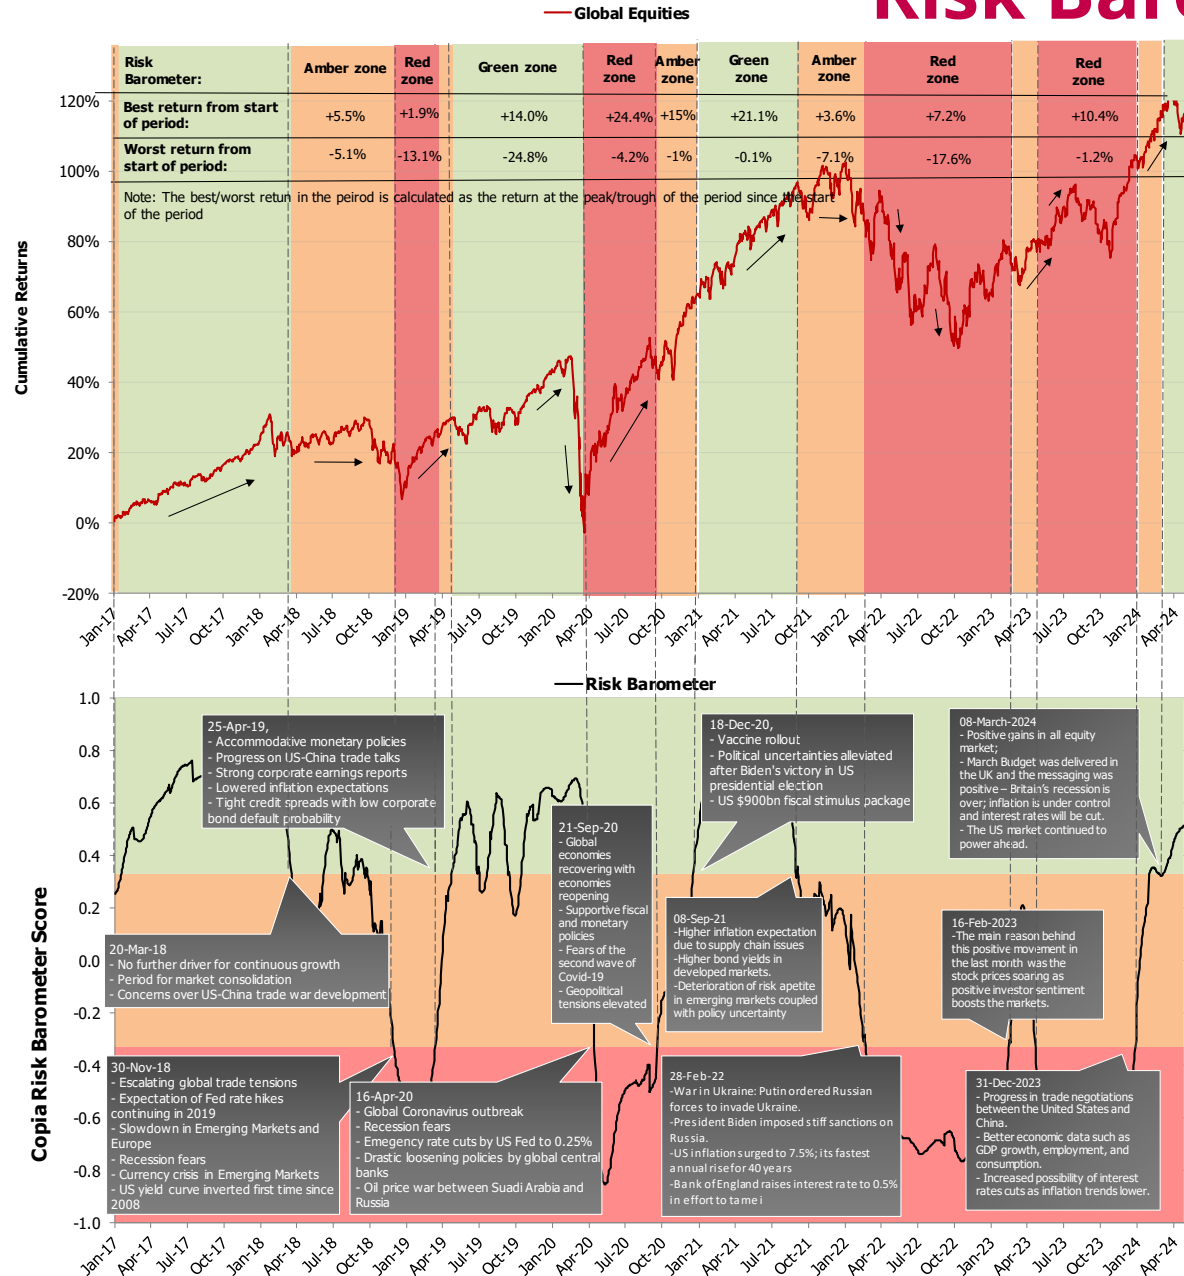

Primary drivers for the Risk Barometer:

- **Government bond markets:** Despite major global yield curves remaining inverted, the extent of inversion has narrowed from the levels seen for throughout 2023. This is an encouraging signal from bond markets, suggesting an increased likelihood of rate cuts in developed markets this year.
- **Equity market pricing:** Following Federal Reserve Powell's unexpected dovish comments, investors are pricing in expectations that the Fed is likely done raising rates. This has been a positive signal for markets with equity market momentum rising over the past quarter.
- **Credit Spreads:** Credit spreads have continued to tighten, indicating corporate bond investors are not pricing in a systemic default of the bonds and signalling a lower probability of recession.
- **Overall:** The overall signals from both equity and fixed income have improved. Leading to the Risk Barometer providing a positive outlook towards risk assets.

Note: The Risk Barometer score varies between -1.0 and +1.0. A score of -1.0 indicates an extremely poor economic outlook, which is accompanied by a high probability of negative returns in risky asset classes. A score of 0 indicates a neutral economic outlook with almost equal probability of positive and negative returns in risky asset classes. A score of +1.0 indicates an extremely positive economic outlook, which is accompanied by a high probability of positive returns in risky asset classes.

Risk Barometer history

- The top chart shows the market performance (best and worst returns) during different Risk Barometer regimes.
- The bottom chart shows how the Risk Barometer has moved between different regimes and the triggers for regime changes.
- The Risk Barometer is a forward-looking quantitative model that provides a systematic rules-based approach for dynamic risk management.

Note: The Risk Barometer score varies between -1.0 and +1.0.

A score of -1.0 indicates an extremely poor economic outlook, which is accompanied by a high probability of negative returns in risky asset classes.

A score of 0 indicates a neutral economic outlook with almost equal probability of positive and negative returns in risky asset classes.

A score of +1.0 indicates an extremely positive economic outlook, which is accompanied by a high probability of positive returns in risky asset classes.

Source: Copia Capital Management, Refinitiv Datastream

Global Equities Returns is based on actual data of MSCI World Index for the period between 31-Dec-2016 and 30-Apr-2024.

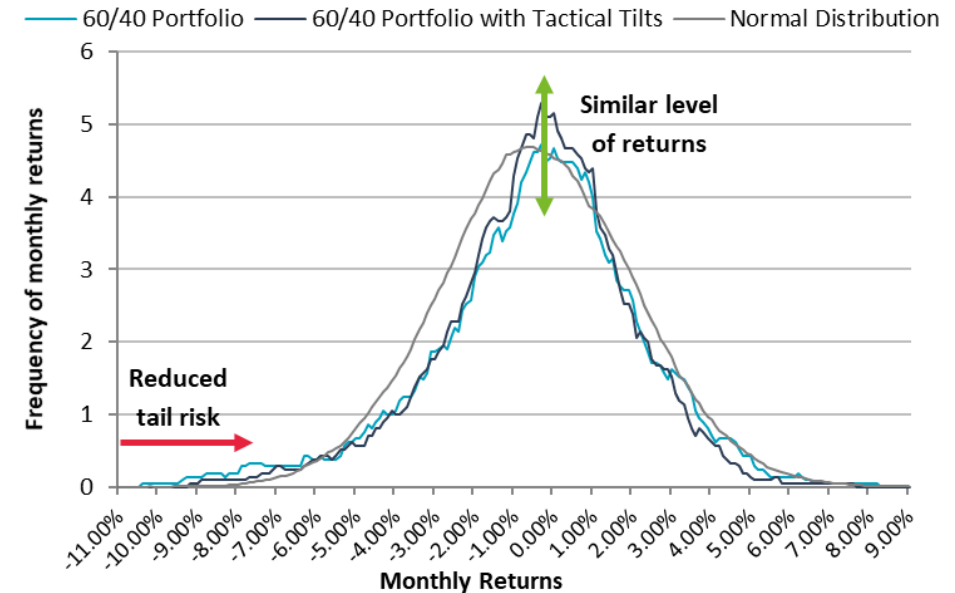

Impact of dynamic risk management using the Risk Barometer

- Objective is to achieve similar levels of returns, with a narrower dispersion of returns (reduced tail risk)
- Can enhanced risk-adjusted returns
- Can deliver a smoother investment journey whilst mitigating downside risk
- We evaluate impact using a theoretical 60/40 portfolio with and without the Risk Barometer

	Annualised Return	Annualised Volatility	Sharpe Ratio	Maximum Drawdown
60/40 Portfolio	6.05%	8.38%	0.72	-25.40%
60/40 Portfolio with Tactical Tilts	5.92%	7.35%	0.80	-19.13%
Impact	→ -0.13%	↓ -12.24%	↑ 11.42%	↓ -24.68%

Note: 60/40 Portfolio consists of 60% allocation to MSCI World Index and 40% allocation US 10-year Bond Index rebalanced monthly. Figures are based on historic actual figures in GBP terms for the period 31-Jan-2000 and 30-Apr-2024. All return figures are before fees.

The 60/40 Portfolio with Tactical Tilts consists of dynamic allocation to MSCI World Index within a range of 40% to 60% driven by the Risk Barometer. The portfolio is rebalanced monthly and remaining allocation is to US 10-year Bond Index.

Outcome (risk-return) analysis as of 29 April 2024

Our 'Select Accumulation' portfolio was previously known as 'Select'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates. Past performance is not indicative of future performance.
The annualised risk and return figures are calculated based on a historic 5-year period as of 29-Apr-2024.
The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).*

Outcome (cumulative return) analysis as of 29 April 2024

Our 'Select Accumulation' portfolio was previously known as 'Select'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Available CPI data has been used as a comparator for real returns. CPI data for Apr 2024 is currently unavailable and not shown. Past performance is not indicative of future performance.

The cumulative returns are calculated based on the period from the inception date of the Select Accumulation portfolios (31-Oct-2016). The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).

Outcome (annualised return) analysis as of 29 April 2024

Our 'Select Accumulation' portfolio was previously known as 'Select'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Available CPI data has been used as a comparator for real returns. CPI data for Apr 2024 is currently unavailable and not shown. Past performance is not indicative of future performance.

The annualised returns are calculated based on a historic 5-year period as of 29-Apr-2024.

The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).

Outcome analysis as of 29 April 2024

Our 'Select Thematic' portfolio was previously known as 'Copia Enhanced Equity'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates. Past performance is not indicative of future performance.

Understanding the risks

- Investment model portfolios may not be suitable for everyone
- The value of funds can increase and decrease, past performance and historical data cannot guarantee future success
 - Investors may get back less than they originally invested
