

Working with your
adviser to deliver your
investment goals

copia-capital.co.uk

You selected your investment adviser for many good reasons. You trust them and the advice they provide and, thanks to their partnership with Copia Capital Management, you can be even more confident that you are now getting the very best investment solutions throughout your investment lifecycle.

Think of Copia as your adviser's independent investment partner. Your adviser looks to us to provide institutional level research, investment advice, back-office facilities and a control centre rolled into one, so that they are freed up to focus on you and your investment goals.

Who are Copia?

Copia Capital is a multi-award-winning Discretionary Fund Management (DFM) provider, founded in 2013. We're an internationally experienced team and work with leading advisers across the UK.

"We value Copia's analysis and market perspective which then enables us to advise our clients better – this is particularly important at times when the markets are very unstable."

An independent adviser

5 Key Reasons To Trust Copia With Your Money

- 1** We're focused on supporting your adviser to meet your exact objectives, whether that's maximising portfolio returns, generating income or preserving capital, over your investment lifecycle.
- 2** Our efficient portfolio selections combine passive and active funds. The portfolios are all rated for environmental, social and governance (ESG) criteria using independent MSCI ESG Fund Ratings.
- 3** We're impartial and objective, and our portfolio services are based on a scientifically-informed, quantitative methodology.
- 4** We take an active approach to managing risk, with regular portfolio reviews, working in partnership with your adviser.
- 5** Our institutional level efficiency enables us to drive down costs and help your adviser deliver cost-effective investments for you.

How your adviser works with Copia

Copia works exclusively with professional advisers across a wide range of investment platforms to help them better serve their client needs. Your adviser takes the time to understand your goals and expectations and then works with Copia to apply these objectives to selecting and managing the best possible fund portfolio.

We use a proven, 4 step process, which is consistently applied across every one of our portfolios

Your investment objectives are enshrined in an **Investment Process Document** which is agreed by your trusted adviser with Copia for you, and which takes account of the **Consumer Duty** requirements introduced in 2023.

Target Market

Copia designs model portfolios to meet the needs, characteristics and objectives of an adviser's customers in a specific identified target market, such as those looking to grow, maintain or consume their savings. Copia then carries out regular reviews to ensure that the model portfolios continue to meet the customer's needs, characteristics and objectives as part of that target market.

Service

Copia provides you and your adviser with an institutional level of investment process informed by quantitative models and guided by investment expertise, but without the customary barriers to accessing that service. In support of this Copia are available to assist you and your adviser with simple in-depth explanations of those outcomes and ongoing insights into our thinking on market outlook.

Value for money

Copia carries out regular assessments of the value for money of all its portfolios. We believe that, for the price you pay as a customer, you receive excellent value for money in the form of the supportive service and the attractive outcomes delivered. We won the award for 'Best Value for Money' in the Citywire Wealth Manager Adviser Choice Awards in 2021 and our most recent review showed that our performance was in the top quartile compared with market benchmarks, and our costs were at the lower end compared with our peers.

Details of our management charge and the cost of the underlying funds we use, which vary from product to product based on implementation cost, are available via your adviser.

Communications

Copia communication is not only "fair, clear and not misleading" but is understandable, actually helping you and your adviser to make effective decisions to meet your goals. However, there may be times when Copia will have to make an extra effort to make our communication clear and we are keen to work with your adviser to ensure this.

Outcomes

Your model portfolio is regularly monitored to ensure, firstly that we adhere to your investment mandate agreed with your adviser and specified in the Investment Process Document, and secondly to deliver good investment outcomes.

How we work

Monitoring, aligning and regularly balancing risk

Copia uses a mix of active and passive funds to construct portfolios. Passive funds give access to the markets at low cost with active funds added to portfolios in selected markets where our scientifically-informed methodology suggests they are likely to add to investment performance.

The funds we use are all transparent, liquid and cost efficient, which allows for more targeted risk management at portfolio level.

Copia's portfolios are regularly monitored by our quantitative modelling tools to check whether any re-alignment is needed.

Working in partnership with your adviser, Copia's proven approach ensures your hard earned money is invested wisely and always working as hard for you as it possibly can.

Our toolkit

Copia has created a scientific toolkit with four key elements. This, together with our research capabilities enables us to manage investment portfolios with impressive results.

Quant model

Two common risks when it comes to investing are emotion and unconscious bias. Our Quant Model strips away any preconceptions and bias, to ensure the decision to invest in a particular asset class is driven only by past performance and predicted returns given the current economic outlook.

Fund Screener

There are thousands of potential fund options and just a handful will satisfy your investment goals. Copia's Fund Screener filters out the best options according to cost efficiency, liquidity, consistency of performance and currency.

Optimisation Tool

Different asset classes deliver different risk-return metrics and Copia's Optimisation Tool ensures each client's fund portfolio is continually being fine-tuned to meet their target outcomes.

Risk Barometer

Gives clients the reassurance of an extra layer of financial protection. Our Risk Barometer steers investment portfolios towards safer asset classes during periods of uncertainty and diminishes exposure to riskier investments.

Understanding the risks

Your adviser will work with you to select the portfolio services that best match your investment goals and individual risk profile. We take this a step further by managing your portfolio to give you the best of opportunities to achieve those targets. However as with all investments, there are some considerations and risk factors to be aware of:

- Investment model portfolios may not be suitable for everyone
- The value of funds can increase and decrease, past performance and historical data cannot guarantee future success
- Investors may get back less than they originally invested.

A person is shown rock climbing a steep, overhanging rock face. The climber is shirtless, wearing dark shorts and climbing shoes, and is secured by a rope and harness. The rock is a light brown color with visible textures and cracks. The background is a clear blue sky.
